Professional Summary

Full-stack Software Engineer with 10+ years' experience delivering scalable applications across FinTech, SaaS, and startup environments. Specialized in .NET Core microservices, Angular front-ends, and cloud/on-premise architectures. Proven track record of modernizing legacy systems, rebuilding applications for maintainability, and improving software delivery velocity.

Passionate about AI-assisted development and developer productivity—building tools that leverage LLMs and prompt engineering to accelerate code understanding, automate refactoring, and enhance team efficiency through intelligent automation.

Featured Open Source Project

DevContext – AI-Powered .NET Code Intelligence Tool

📦 **Recent** | 🔗 github.com/shaahink/DevContext

Tech Stack: C#, .NET 8, Roslyn API, AI Integration, Prompt Engineering, CLI Tools, MSBuildWorkspace, JSON/Markdown Output

Open-source CLI tool that analyzes .NET solutions to generate structured architectural context for LLM-assisted development. Implements Roslyn-based parsing, dependency graph extraction, and intelligent call-tree traversal to enable AI-powered code reasoning, automated refactoring, and accelerated developer onboarding.

Technical Skills

Languages & Frameworks

C#, .NET Core, Python, TypeScript, JavaScript | ASP.NET Core, FastAPI, Angular, WPF

Architecture & Design

Microservices, REST APIs, Event-Driven Architecture, Clean Architecture, SOLID Principles, Design Patterns, Dependency Injection

Cloud & Infrastructure

Azure, GCP, Docker, Terraform, CI/CD (Azure DevOps, GitHub Actions)

Data & Messaging

SQL Server, SQLite, Entity Framework, Dapper, Cosmos DB, BigQuery, RabbitMQ, Pub/Sub

AI & Developer Tooling

LLM Integration, Prompt Engineering, Code Analysis (Roslyn), Python ML Libraries (pandas, scikit-learn, SciPy)

Engineering Practices

TDD, Unit/Integration Testing, Code Review, Git Workflows, API Design, Authentication (JWT, IdentityServer)

Professional Experience

Healthcare SaaS Provider, London (Hybrid) – Contract

Software Engineer (Contract) | Nov 2024 – Sep 2025

Tech: C#, .NET Core, Angular, TypeScript, Azure, Azure DevOps, Python

- **Redesigned and rebuilt legacy client-server application** with modern architecture, reducing technical debt by 60% and enabling twice-weekly release cadence through improved CI/CD pipelines.
- **Architected loosely-coupled microservices** replacing monolithic design, improving system scalability and reducing deployment risk.
- Cleared 70% of accumulated bug backlog through systematic refactoring and improved testing coverage.
- Automated recurring operational tasks using Python scripts, saving 20+ team hours weekly.
- Mentored junior developers on clean architecture, SOLID principles, and DevOps best practices.

Clearpath Partnership Ltd, London (Remote) - Contract

Software Engineer (Contract) | Nov 2023 – Sep 2024

Tech: C#, .NET Core, GCP, React, Dapper, Docker, Web API, Terraform

- Designed high-throughput .NET Core APIs integrated with GCP services (Pub/Sub, Cloud Storage, Compute Engine) processing 500K+ daily transactions.
- Migrated long-running batch jobs to event-driven architecture using RabbitMQ, improving system scalability and reducing failure rates by 40%.
- Built GCP infrastructure as code with Terraform, streamlining provisioning and accelerating feature delivery.
- Modernized React Admin Portal with clean architecture patterns, improving maintainability and user workflow efficiency.
- Integrated ML pipeline components into Project DARTMOUTH, enabling 2× data processing capacity without performance degradation.

Trading Technology Company, London (Contract)

Software Engineer / Algo Trader | Nov 2022 – Sep 2023

Tech: C#, .NET Core, Entity Framework, Web API, Python, FastAPI, SQL Server, Angular

- Developed two core microservices for algorithmic trading platform and real-time data analytics using SOLID principles and clean architecture.
- Built data cleansing and analysis tools in .NET and SQL Server, improving data quality and accelerating analyst decision-making.
- Prototyped ML-based trading models in Python (pandas, scikit-learn) with robust backtesting frameworks for pattern recognition and signal validation.
- Created Angular dashboards for real-time trading performance monitoring and portfolio analytics.
- Led cross-functional collaboration and mentored junior developers on TDD, API design, and data engineering practices.

Basemap Ltd, Guildford

Software Engineer | Jul 2019 – Aug 2022

Tech: C#, .NET Core, TDD, Angular, SQL Server, Azure DevOps, Docker, Python

- Delivered scalable queue management and deferred results system using TDD, increasing system throughput by 30% and improving reliability.
- Developed centralized SSO service using IdentityServer and JWT for secure multi-application authentication across platform.
- Built Angular dashboards for analytics and operational monitoring, improving visibility into system performance.
- Automated internal workflows with Python scripting, reducing manual effort and minimizing human error.
- Mentored team on CI/CD pipeline implementation, Git workflows, and test-driven development practices.

Da Systems Ltd, High Wycombe

Senior Software Developer | Sep 2017 – Jun 2019

Tech: C#, ASP.NET Web API, Angular, Entity Framework, TypeScript, Microservices, Xamarin

- Built SaaS courier management platform handling high-volume, real-time logistics transactions with 99.9% uptime.
- Applied Dependency Injection (StructureMap IoC) and SOLID principles to create maintainable, testable microservices architecture.
- Implemented token-based authentication (JWT) and modular front-end architecture for multi-tenant deployment.
- Developed Xamarin mobile app (MVVM pattern) for field operations and driver management.
- Achieved high test coverage through comprehensive unit and integration testing, reducing production defects by 50%.

Basemap Ltd, Guildford

Senior Software Developer | Feb 2015 – Sep 2017

Tech: ASP.NET MVC, C#, WPF, SQL Server, AngularJS, Dapper, GIS Integration

- Led development of DataCutter and WEB-TRACC, flagship mapping and transport accessibility analysis tools for government and commercial clients.
 - Contributed core features and performance optimizations to TRACC, the market-leading transport accessibility analysis platform.
 - Designed multi-tenant architecture and GIS integration for scalable enterprise deployment across public sector organizations.
-

Earlier Roles (2011–2015)

Software Developer at Paysa (Remote) and NEXSO

Delivered ASP.NET and WPF solutions in C# and SQL Server. Built automation tools, contributed to early SPA development with AngularJS, and designed responsive UI/UX. Developed Physiotherapy WPF application with asynchronous design patterns and created reusable admin templates.
